ANALYTIC REPRESENTATION OF NUCLEON- AND PION-EMISSION
SPECTRA FROM NUCLEON-NUCLEUS COLLISIONS
IN THE ENERGY RANGE 750-2000 MeV

R. G. Alsmiller, Jr., and J. Barish*

Abstract

Analytic fits, obtained by the method of linear least squares, to the intranuclear-cascade data generated by H. W. Bertini are given. For 750-, 1000-, and 2000-MeV protons incident on oxygen, aluminum, and lead, and for 1000-MeV neutrons incident on these same elements, analytic expressions are given for

1. the cascade neutron-, proton-, π^+ -, π^0 -, and π^- -emission spectra in the laboratory angular intervals $0-30^\circ$, $30-60^\circ$, $60-90^\circ$, $90-180^\circ$, and $0-180^\circ$, and
2. the evaporation neutron- and proton-emission spectra.

I. INTRODUCTION

Using an intranuclear-cascade model, H. W. Bertini¹⁻⁵ has generated a large amount of data on the nonelastic cross section and the energy and angular distribution of emitted neutrons and protons when neutrons and protons in the energy range 25 to 400 MeV are incident on a variety of targets. In a previous report, hereinafter referred to as 6, an analytic representation of these data, obtained by fitting the Monte Carlo results using the method of linear least squares, was presented. Recently H. W. Bertini extended his calculations to 2000 MeV and published some preliminary results.⁷ In this paper, the fitting procedure used in 6 is applied to the new data, and analytic expressions are given for the particle-emission spectra. The fits obtained are an adequate representation of the Monte Carlo data for many purposes, but, because the energy range to be covered is larger than in 6, they are not always as reliable as those given in 6. For protons of energy 750, 1000, and 2000 MeV incident on oxygen, aluminum, and lead, and for neutrons of energy 1000 MeV incident on oxygen, aluminum, and lead, analytic expressions are given for

1. the cascade neutron-, proton, π^+ -, π^0 -, and π^- -emission spectra in the laboratory angular intervals $0-30^\circ$, $30-60^\circ$, $60-90^\circ$, $90-180^\circ$, and $0-180^\circ$, and
2. the evaporation neutron- and proton-emission spectra.

Because the total nonelastic cross section is slowly varying and because of the small number of data points, an expression for this cross section is not given.

II. DESCRIPTION OF TABLES AND DISCUSSION OF FIGURES

The fitting procedure used is the same as that described in 6 in every detail, so it will not be discussed here. The energy distribution in a specified angular interval of each type of emitted cascade particle is given in the form

$$F(E) = \frac{1}{E_0} \exp \left[\sum_{j=0}^v A_j \left(\frac{E}{E_0} \right)^j \right], \quad (1)$$

where E_0 is the energy of the incident particle and the A_j 's are the coefficients obtained by the method of linear least squares. The coefficients depend, of course, on the energy and type of incident particle, the target nucleus, and the type of emitted particle.

The coefficients to be used in Eq. 1 for all the cases considered here are given in Tables 1-36.* The coefficients for the five types of emitted cascade particles for a given type and energy of incident particle and a given nucleus are contained in three tables. At the top of each table, the type of incident particle and nucleus is given. Above each group of coefficients, the type of emitted particle is specified. The first column in the tables gives the incident energy, the second column gives the angular interval, and columns 3 through 8 contain the coefficients. When these coefficients are used in Eq. 1 the distributions have the units, number per MeV per steradian per interaction, if the angular interval is $0-30^\circ$, $30-60^\circ$, $60-90^\circ$, or $90-180^\circ$ and number per MeV per interaction if the angular interval is $0-180^\circ$. That is, when

* For convenience, all tables and figures are collected in the appendices at the end of the report.

the angular interval $0-180^\circ$ is used, the distribution has been integrated over all solid angles. At the top of each set of coefficients, E_{\min} is specified, and, in the last column in the tables, E_{\max} divided by E_0 is given. This E_{\min} is a parameter that occurs in the calculations of Bertini and represents the energy below which no cascade particles are emitted. The quantity E_{\max} is the highest energy considered in doing the fits. The fits are to be used only in the energy range E_{\min} to E_{\max} , and it must be understood that, if they are used outside of this range, very erratic behavior may occur. Columns 9 and 10 give the number of particles of a given type emitted in a given angular interval and the energy of these particles divided by E_0 . The values in these columns are obtained from the equations:

$$\text{No. of Emitted Particles} = 2\pi[\cos\theta_1 - \cos\theta_2] \int_{E_{\min}}^{E_{\max}} F(E)dE , \quad (2)$$

$$\text{Energy of Emitted Particles}/E_0 = 2\pi[\cos\theta_1 - \cos\theta_2] \frac{\int_{E_{\min}}^{E_{\max}} EF(E)dE}{E_0} , \quad (3)$$

when the θ intervals $0-30^\circ$, $30-60^\circ$, $60-90^\circ$, and $90-180^\circ$ are used, and

$$\text{No. of Emitted Particles} = \int_{E_{\min}}^{E_{\max}} F(E)dE , \quad (4)$$

$$\text{Energy of Emitted Particles}/E_0 = \frac{1}{E_0} \int_{E_{\min}}^{E_{\max}} EF(E)dE , \quad (5)$$

when the θ interval 0 to 180° is used.

The energy distributions for the emitted evaporation particles are given in the form

$$G(E) = \frac{1}{25} \exp\left[\sum_{j=0}^v A_j \left(\frac{E}{25}\right)^j\right]. \quad (6)$$

The coefficients for all of the cases considered are given in Tables 37-39. When the coefficients given in the tables are used in Eq. 6, the resulting energy distributions have the units, number per MeV per interaction. The quantities E_{\min} and E_{\max} are again the energy limits, outside of which the fits are not to be used, and columns 8 and 9 are obtained from the equations:

$$\text{No. of Emited Particles} = \int_{E_{\min}}^{E_{\max}} G(E)dE, \quad (7)$$

$$\text{Energy of Emited Particles}/E_0 = \frac{1}{E_0} \int_{E_{\min}}^{E_{\max}} EG(E)dE. \quad (8)$$

In some cases in the tables, all of the coefficients are shown to be zero. When this occurs, it means that so few particles were emitted that the Monte Carlo results were not considered to be statistically significant and no attempt was made to obtain a fit. In those cases where fits are not given, the number of emitted particles obtained in the Monte Carlo calculations is shown in column 8 for comparison purposes.

Comparisons between the Monte Carlo data and the analytic fits are given in Figs. 1-17. All of the comparisons in the figures are for the

case of 2000-MeV protons incident on aluminum. In Figs. 1-3, the cascade neutron-emission spectra in the angular intervals $0\text{-}30^\circ$, $30\text{-}60^\circ$, and $0\text{-}180^\circ$, respectively, are shown. In Figs. 4-15, similar results are given for the other emitted cascade particles. The evaporation neutron and proton spectra are shown in Figs. 16 and 17.

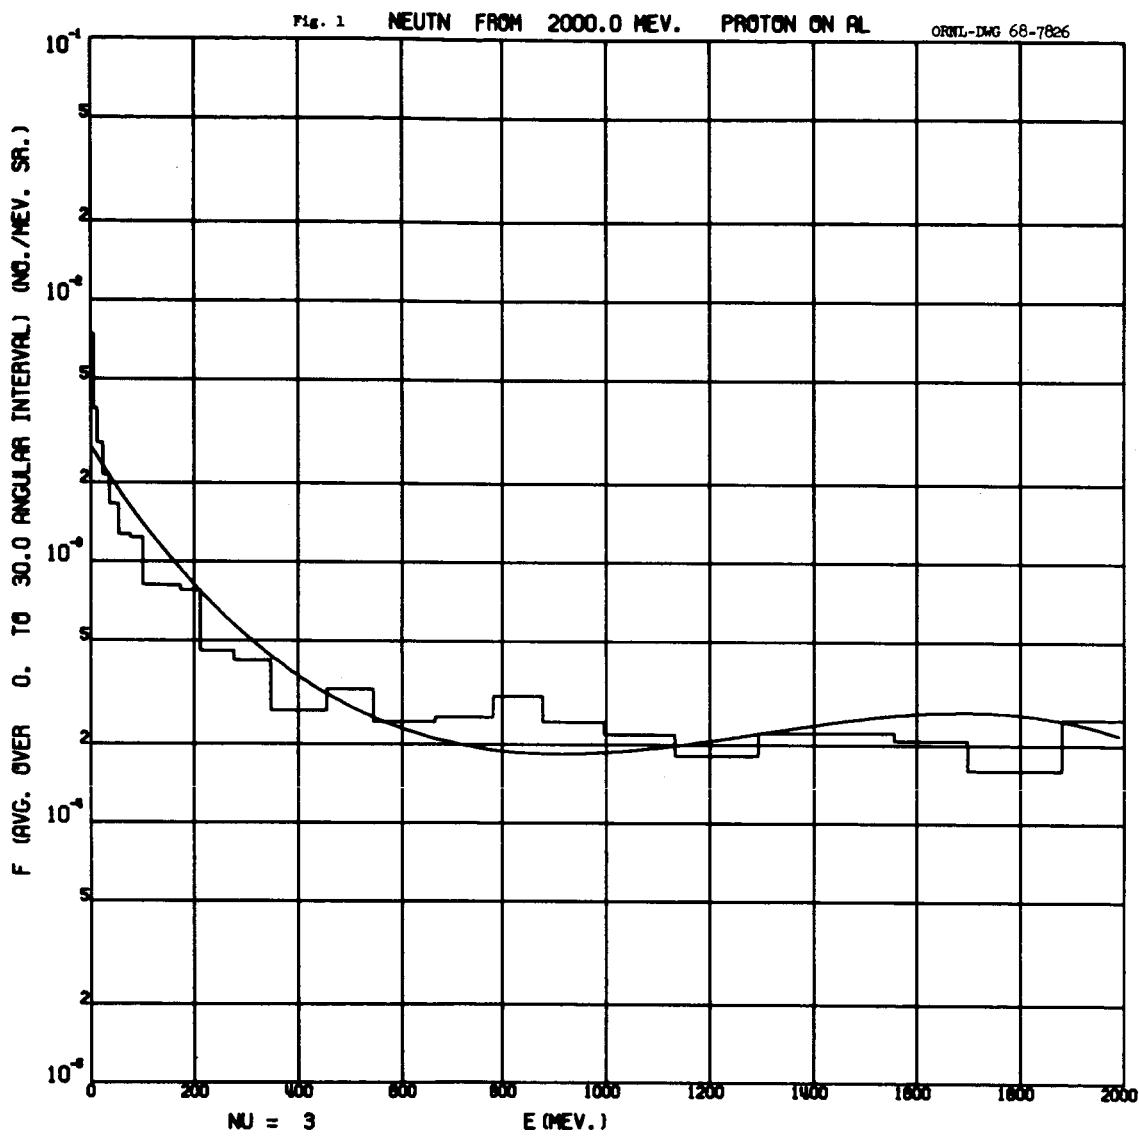

In some cases, the analytic fit is a very good representation of the Monte Carlo data, but this is by no means always the case. In this regard, Fig. 3 should be particularly noted since it is an example of one of the poorer fits to the data. In the fitting procedure used here, as in 6, the derivative of the fitted curve was tested for changes in sign, and if more than two sign changes occurred the fit was assumed to contain nonphysical oscillations, and a fit with a smaller number of parameters, i.e., with a smaller value of v , was attempted. This procedure was continued until $v = 2$ was reached and the fit with $v = 2$ was accepted without further testing. Figure 3 gives an example of the kind of fit which results when this procedure ultimately leads to a three-parameter fit. In those places in the tables where only three non-zero coefficients are given, the fits must be considered to be very approximate. Of course, even when more than three parameters are given, there is no assurance that the fit is a good representation of the Monte Carlo data. It is hoped that the analytic expressions given in this report will be useful, but it must be understood that for some purposes they may not be adequate.

NASA-High Energy Listing

Tino Ahrens, Advanced Research Corporation, 715 Miami Circle, N.E., Atlanta,
Georgia 30324

Louis Avrami, Explosives Laboratory, Bldg. 407, Picatinny Arsenal, Dover,
New Jersey 07301

M. Awschalom, Princeton Penn. Accelerator, P. O. Box 682, Princeton,
New Jersey 08540

M. Barbier, CERN, Geneva Switzerland

N. Barr, Radiological Physics Branch, Division of Biology and Medicine,
U. S. Atomic Energy Commission, Washington, D. C. 20545 (5 copies)

C. K. Bauer, Dept. 72-34, Z-26, Lockheed-Georgia Company, Marietta,
Georgia 30060

P. R. Bell, TH, Chief of Lunar and Earth Sciences Division, Manned Spacecraft Center- NASA, Houston, Texas 77058

S. Bresticker, Grumman Aircraft Engineering Corp., Space Sciences Group,
Plant 5, Bethpage, L. I., New York 11714

Karan O. Brien, Health and Safety Laboratory, Radiation Physics Division,
376 Hudson Street, New York, New York 10014

Brooks Air Force Base, Radiobiology Department, Chief, San Antonio,
Texas 78235

M. O. Burrell, M-RP-NIP, National Aeronautics and Space Adm., Marshall
Space Flight Center, Huntsville, Alabama 35812

B. W. Colston, U. S. Atomic Energy Commission, Sandia Area Office,
P. O. Box 5400, Albuquerque, New Mexico 87115

R. G. Cochran, Department of Nuclear Engineering, A and M College of
Texas, College Station, Texas

Ted Colvin, Bendix Systems Division, 3300 Plymouth Road, Ann Arbor,
Michigan 48105

E. A. Cosbie, Argonne National Laboratory, Argonne, Illinois 60440

Frederick P. Cowan, Brookhaven National Laboratory, Upton, L. I., New
York 11973

Director, Defense Atomic Support Agency, Pentagon, Washington, D. C.
20301

Charles A. Dempsey, 6570 AMRL (MRT), Wright-Patterson AFB, Ohio 45433

H. DeStaebler, Jr., Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305

Herman J. Donnert, U. S. Army Nuclear Defense Laboratory, AMXND-C, Edgewood Arsenal, Maryland 21010

D. W. Drawbaugh, Westinghouse Electric Corp., Astronuclear Laboratory, P. O. Box 10864, Pittsburgh, Pennsylvania 15236

John E. Duberg, National Aeronautics and Space Adm., Langley Research Center, Langley Field, Virginia 23365

D. L. Dye, The Boeing Company, Mail Stop S3-72, Seattle, Washington 98124

Ronald F. Edge, Department of Physics, University of South Carolina, Columbia, South Carolina

Nat Edmunson, Code R-RP-N, National Aeronautics and Space Adm., Marshall Space Flight Center, Huntsville, Alabama 35812

Robley D. Evans, Professor of Physics, Room 6-315, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139

E. M. Finkelman, Grumman Aircraft Engineering Corp., LEM Project, Plant 25, Bethpage, L.I., New York 11714

Trutz Foelsche, National Aeronautics and Space Adm., Langley Research Center, Langley Field, Virginia 23365

R. E. Fortney, Northrop Space Laboratories, 3401 West Broadway, Hawthorne, California 90250

Leo Fox, Code RBH, Biotechnology and Human Research Division, National Aeronautics and Space Adm., Washington, D. C. 20546

Stan Freden, Aerospace Corp., Box 95085, Los Angeles, California 90045

J. Y. Freeman, Division MPS, CERN, Geneva 23, Switzerland

J. Geibel, CERN, Geneva, Switzerland

R. C. Good, Jr., General Electric Company, Room M7023H - VFSTC, P. O. Box 8555, Philadelphia, Pennsylvania 19101

F. Gordon, Code 716, National Aeronautics and Space Adm., Goddard Space Flight Center, Greenbelt, Maryland 10027

Raymond M. Hansen, MS 235, National Aeronautics and Space Adm., Langley Research Center, Mail Stop 235, Langley Field, Virginia 23365

Harry Harrison, Code RRE, National Aeronautics and Space Adm., Hdqts.,
Washington, D. C. 20546

Russell Heath, Phillips Petroleum Company, P. O. Box 2067, Idaho Falls,
Idaho 83401

Herbert D. Hendricks, National Aeronautics and Space Adm., Langley Research
Center, MS499, Langley Field, Virginia 23365

W. N. Hess, National Aeronautics and Space Adm., Goddard Space Flight
Center, Greenbelt, Maryland 20771

R. H. Hilberg, Bellcomm, Inc., 1100 17th Street, N.W., Washington, D. C.
20036

Charles W. Hill, Dept. 73-69, Zone 280, Lockheed-Georgia Company, Marietta,
Georgia 30060

L. Hoffman, CERN, Geneva, Switzerland

J. T. Holloway, Grants and Research Contracts, Office of Space Sciences,
National Aeronautics and Space Adm., Washington, D. C. 20546 (5 copies)

William C. Hulten, National Aeronautics and Space Adm., Mail Stop 235, Langley
Research Center, Langley Field, Virginia 23365

T. Inada, National Institute Radiological Sciences, 250 Kurosuna-Cho, Chiba-
Shi, JAPAN

Lt. Joseph F. Janni, WLRB-1, Air Force Weapons Laboratory, Kirtland Air Force
Base, New Mexico 87117

Dale W. Jenkins, Chief, Environmental Biology, Office of Space Sciences,
NASA, Washington, D. C. 20546

Philippe Tardy-Joubert, Serv. De Protection Contre Les Radiation, Centre D.
Etudes Nucleaires De Saclay, B. P. No. 2, Gif-Sur-Yvette (Seine et Oise),
FRANCE

Clyde Jupiter, General Atomic, P. O. Box 608, San Diego, California 92112

Irving Karp, NASA/ Lewis Research Center, Cleveland, Ohio 44135

Ludwig Katz, Air Force Cambridge Research Center, L. G. Hanscom Field,
Massachusetts

Glenn Keister, Boeing Airplane Company, Aerospace Division, P. O. Box 3707,
Seattle, Washington 98124

J. Warren Keller, Code RV-1, National Aeronautics and Space Adm., Washington,
D. C. 20546 (3 copies)

James F. Kenny, Boeing Scientific Research Laboratory, P. O. Box 3981,
Seattle, Washington 98124

E. C. Kidd, Zone S71, Dept. 61-2, General Dynamics/Fort Worth, P. O. Box 748,
Fort Worth, Texas 76101

David King, Department of Physics, University of Tennessee, Knoxville,
Tennessee 37916

Robert L. Kloster, McDonnell Aircraft Corp., P. O. Box 516, St. Louis,
Missouri 63166

George A. Kolstad, Assistant Director Physics-Math Programs, Division of
Research, U. S. Atomic Energy Commission, Washington, D. C. 20545

Eugene B. Konecci, Department of Management BEOB-200, University of Texas,
Austin, Texas 78712

W. Kreger, Code 940, U. S. Naval Radiological Defense Laboratory, San
Francisco, California 94135

Ed Kuhn, Republic Aviation Corporation, Power Conversion Systems Division,
Farmingdale, L. I., New York 11735

Wright H. Langham, Los Alamos Scientific Laboratory, Los Alamos, New
Mexico 87544

Borje Larsson, University of Uppsala, The Gustaf Werner Institute, Uppsala,
Sweden

J. M. Lavie, Centre D. Etudes Nucleaires, De Saclay, S. E. C. R. - B. P.
No. 2, 91-Gif-Sur-Yvette, FRANCE

Martin Leimdorfer, Industri-Matematik AB, De Geersgatan 8, Stockholm No.
SWEDEN

S. H. Levine, Northrop Space Laboratories, 3401 W. Broadway, 2452/61,
Hawthorne, California 90250

Lynn R. Lewis, Dept. 250, Bendix Systems Division, 3300 Plymouth Road, Ann
Arbor, Michigan 48105

John R. Lilley, A-830-BBF0-78, Missile Space Systems Division, Douglas
Aircraft Co., Inc., Santa Monica, California

S. J. Lindenbaum, Brookhaven National Laboratory, Upton, L. I., New
York 11973

Major Russell E. Linkous, Air Force Systems Command (SCTR), Andrews AFB,
Maryland 20331

M. Stanley Livingston, Cambridge Electron Accelerator, 42 Oxford Street
Cambridge, Massachusetts 02139

Robert Macklin, Jet Propulsion Laboratory, Pasadena, California 91103

Brian Mar, Boeing Airplane Co., MS 23-82, Aerospace Division, P. O. Box
3707, Seattle, Washington 98124

Thomas J. McGuire, Systems Engineering Group (SESSV), Wright-Patterson AFB,
Ohio 45433

E. J. McLaughlin, Space Medicine, NASA - Code MM, Washington, D. C. 20546

R. V. Meghrebian, Jet Propulsion Laboratory, 4800 Oak Grove Drive, Pasadena,
California 91103

Albert E. Metzger, Jet Propulsion Laboratory, 354-401F, 4800 Oak Grove,
Pasadena, California

J. M. Miller, Chemistry Department, Columbia University, New York, New
York 10027

R. A. Miller, Zone S71, Dept. 61-2, General Dynamics/Fort Worth, P. O. Box
748, Fort Worth, Texas 76101

Jerry L. Modisette, National Aeronautics and Space Adm., Manned Spacecraft
Center, Houston, Texas 77001 (5 copies)

Winnie M. Morgan, Technical Reports, Grants and Research Contracts, Office of
Space Sciences, NASA, Washington, D. C. 20546 (25 copies)

B. J. Moyer, University of California, Lawrence Radiation Laboratory,
6141 Building 50A, Berkeley, California 94720

R. F. Mozley, SLAC, Stanford University, Stanford, California 94305

Capt. J. D. Munson, Space Systems Division (SSTDS), Los Angeles Air Force
Station, Los Angeles, California 90045

Sam V. Nablo, ION Physics Corporation, Burlington, Massachusetts 01803

R. R. Nash, Code RRM, National Aeronautics and Space Adm., Washington,
D. C. 20546

John P. Neissel, MC-506, 175 Courtner Avenue, General Electric Company,
San Jose, California 95125

W. R. Nelson, Stanford Linear Accelerator Center, Stanford, California
94305

W. K. H. Panofsky, Stanford Linear Accelerator Center, Stanford University,
Stanford, California 94305

Wade Patterson, University of California, Lawrence Radiation Laboratory,
Berkeley, California 94720

Maynard Pearson, Boeing Airplane Company, Aerospace Division, P. O. Box 3707,
Seattle, Washington 98124

Col. John E. Pickering, USAF, National Aeronautics and Space Adm., (Code MM),
Washington, D. C. 20546

G. F. Pieper, Code 600, National Aeronautics and Space Adm., Goddard Space
Flight Center, Greenbelt, Maryland 10027

Robert Pruett, P. O. Box 95085, Los Angeles, California 90045

Arthur Reetz, Code RV-1, National Aeronautics and Space Adm., Washington,
D. C. 20546 (3 copies)

O. Reynolds, Director, Bio-Science Programs, Office of Space Sciences,
National Aeronautics and Space Adm., Washington, D. C. 20546 (5 copies)

Robert G. Riedesel, Douglas Aircraft Company, Missile and Space Division,
3000 Ocean Park Blvd., Santa Monica, California 90405

Don Robbins, ET32, National Aeronautics and Space Adm., Manned Space-
craft Center, Houston, Texas 77058

H. J. Schaefer, U. S. Naval School of Aviation Medicine, U. S. Naval
Aviation Medical Center-54, Pensacola, Florida 32512

W. Wayne Scott, Chattanooga State Technical Institute, 4501 Annico Highway,
Chattanooga, Tennessee 37401

Robert L. Seale, University of Arizona, Tuscon, Arizona 85721

Pierre Lafore Sepp, Commissariat A L. Energie Atomique, Centre D. Etudes
Nucleaires, De Fontenay-Aux-Roses (Seine), Boite Postale No. 6, 92
Fontenay Aux Roses, FRANCE

Jérôme L. Shapiro, Division Engineering and Applied Science, Pasadena,
California 91109

R. D. Shelton, Code R-RP-N, National Aeronautics and Space Adm., Marshall
Space Flight Center, Huntsville, Alabama

Robert T. Siegel, Department of Physics, College of William and Mary,
Williamsburg, Virginia 23185

J. J. Singh, M.S. 234, NASA. Langley Research Center, Langley Station,
Hampton, Virginia 23365
